July 15th, 2009

QQcatcher Automatically Burns Files From Hard Disk to Optical Discs Incorporating With Your Favorite Backup And Archive Software

North Brunswick, NJ – [Acronova Technology, Inc.](http://www.acronova.com) unveils QQcatcher, the office-automation software can instantly incorporate with third-party software to burn files from hard disk to multiple discs, on schedule or when new files come in to a folder, via Nimble NB11 automated publisher.

Today, IT professionals run favorite software to regularly backup or archive files from hard disk to CD/DVD and Blu-ray discs for security, management and storage purpose. Yet, because most off-the-shelf software does not support disc autoloader, burning more than one disc requires frequent access to disc drive and manually loading and unloading discs. What a boring task for intelligent professionals and users!

Nimble NB11 is a versatile 100-disc autoloader that is affordable to office and home users. Connected to personal computer via USB cable, it can rip music CDs, burn discs and grab images. QQcatcher is the new force to NB11's software suite designated for the automation in monitoring a local and network-mapped folder and burning files to multiple discs on schedule or when new files are present, day and night, 7 days a week and all year round.

QQcatcher can instantly service almost any your favorite software that transfers files or ISO images to a folder for burning to discs, including Acronis True Image, scanner, accounting, law office and other Enterprise content management (ECM) software. No modification to the software is required, simply set up QQcatcher to monitor the folder where the software send files to and choose the writing policy for it.

For now, QQcatcher is available to Nimble NB11 owners for free. Visit Acronova Technology's website or call us for more information.
