

## *QQGetTray: Ripping procedure stopped when iTunes shows metadata match selection window.*

To avoid the metadata match selection which interrupts the ripping procedure, try performing the ripping without connecting to internet.

Or, under Preference>General in iTunes, uncheck the 'Automatically retrieve CD track names from internet'; during the operation of ripping.

Â

Once the ripping is done, select the tracks and choose 'Get Track Names'; under the 'Advanced'; menu, then select the matches.
